The image shows a screenshot of the Ubuntu desktop environment. The top panel displays the system status bar with the time 21:53 and various icons. The main window is the 'System Settings' application, which is open to the 'User Accounts' section. The 'User Accounts' window shows the user 'trener' with the role of 'Administrator'. The 'Language' is set to 'English (United States)'. The 'Login Options' section shows the 'Password' field with a masked password '.....', 'Automatic Login' is turned off, and the 'Last Login' is 'Logged in'. There is a checkbox for 'Show my login name in the menu bar' which is currently unchecked. An 'Authenticate' dialog box is open in the foreground, displaying the message 'Authentication is required to change user data' and 'An application is attempting to perform an action that requires privileges. Authentication is required to perform this action.' The dialog includes a 'Password:' field and buttons for 'Cancel' and 'Authenticate'.
